Product Description - AL-WS-GE Wall Switch

This switch operates just like any standard residential light switch – however it operates from low voltage controls for the GE/Bryant relay system. This Decorator style switch upgrade looks like any modern switch yet works with the older GE and Bryant type lighting systems.

Available in lower cost Standard and 3-Way versions. Use the standard version for single switch, single light circuits, use the 3-Way if there are many switches controlling one light circuit like stairs and hallways.

Drop in replacement for the GE button switches – this device offers a large button area for easy operation. The proven switch mechanics leverage mass production of decorator switches - now for these existing GE and Bryant Low voltage applications.

Most popular is the momentary button action – toggles the lights on/off. Also available is the On/Off Rocker style.

Available in White, Black from stock - and other colors on request

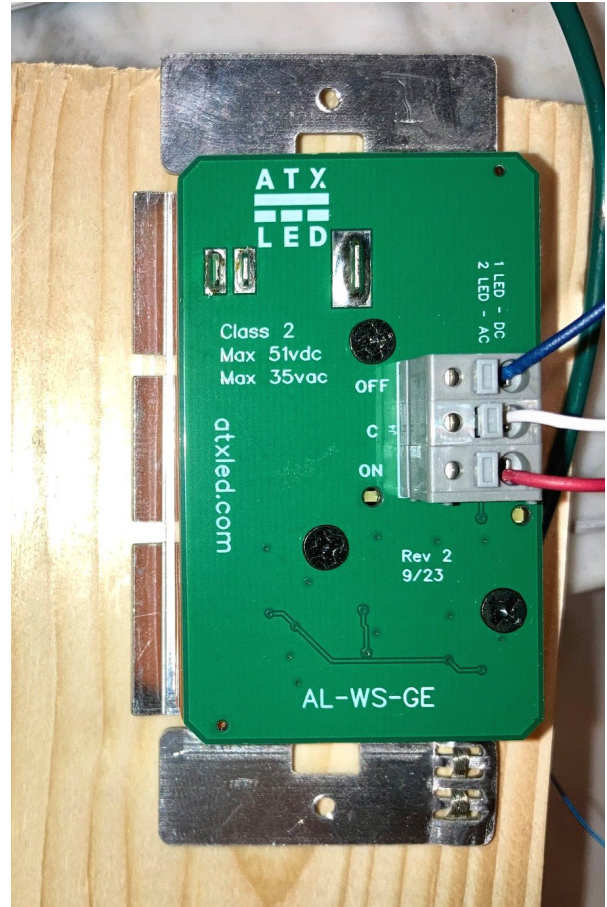

The device has 6 status LEDs

- power on – 2 LEDs – pulse when ON or OFF control is sent
- 2 LEDs indicate connection to ON coil, turn off when On command is sent - one indicates DC, 2 indicates AC
- 2 LEDs indicate connection to OFF coil, turn off when Off command is sent - one indicates DC, 2 indicates AC

[Specifications](#)

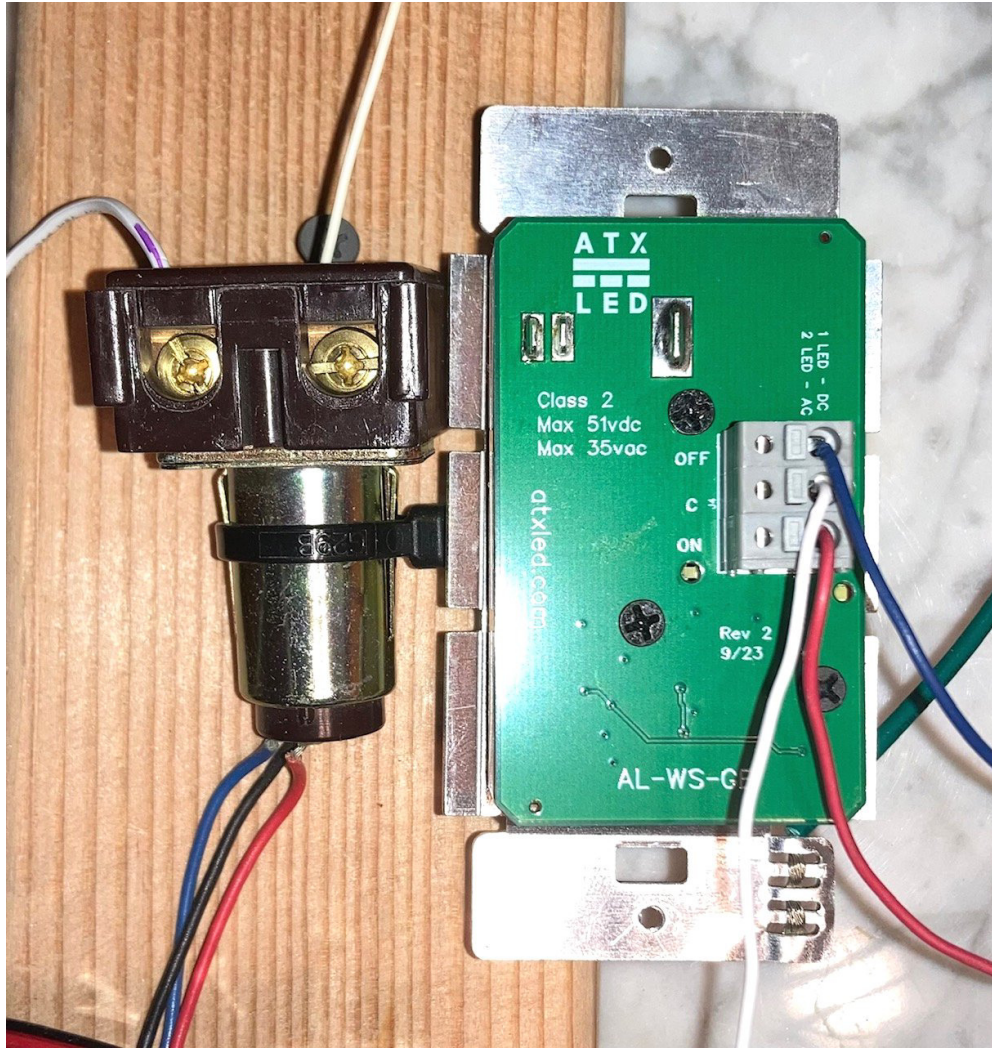

Signal Contact	Spring loaded connectors (3 wires)
Input voltage range	20 to 35 vac
	20 to 51 vdc
Contact current	1 amp – solid state switch
Size	108H (metal) 70H x 34 D x 42 W mm
Wire size	18 to 24 AWG
